DETAILED ACTION

Allowable Subject Matter

Claims 1-3, 7-14, 17-22, 25, 26, 28 30, 31, 36, 44, and 45 are allowed.

The following is an examiner's statement of reasons for allowance: Prior art does not teach or suggest, in combination with the other claimed limitations, implanting boron into the source/drain contact *after* activating the germanium implant. Krishnan et al., the closest prior art of record, teaches implanting boron before activating the germanium implant. As argued by Applicant in the remarks dated 10/24/2006, Krishnan implants germanium in order to amorphize the source/drain implants. In the low-temperature annealing process, only the boron implants within the amorphous region are activated. If the germanium implants were activated before the boron was implanted, the amorphized regions would have been recrystallized, which would have rendered the low-temperature anneal ineffective. Therefore it is not appropriate to combine other relevant prior art with the teachings of Krishnan et al. to reverse the order of the boron implantation and activation steps in order to arrive at the invention as claimed in independent claims 1, 8, 9, 36, 44, and 45, all of which contain the limitation that implanting the boron occurs subsequent to activating the germanium.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
